Disassembly and Assembly Procedure for Battery pack

DISCLAIMER

This repair information is provided to support maintenance and repair of Panasonic products. Repair procedures may involve disassembly of electrical and electronic components and should be performed only by persons with appropriate technical knowledge, skills, tools, and safety precautions.

Improper repair, modification, or handling of the product may result in personal injury, electric shock, fire, data loss, product malfunction, or other property damage.

Before starting any repair work, ensure that proper electrostatic discharge (ESD) protection measures are in place to prevent damage to electronic components.

Repair procedures, required parts, and product configurations may vary depending on the model, region, or product specification. The procedures and illustrations provided in this document are intended as general guidance and may not represent all product variations.

Panasonic does not assume responsibility for any injury, loss, damage, cost, expense, or product failure arising from repairs, modifications, or servicing performed by users or third parties. Any repair work is performed at the sole risk and responsibility of the person carrying out the repair.

Required Tool:
Refer to the section "Required tools" in the website of "Repair Information and Manual for FZ-56."

Battery pack

When replacing the battery pack after turning off the computer

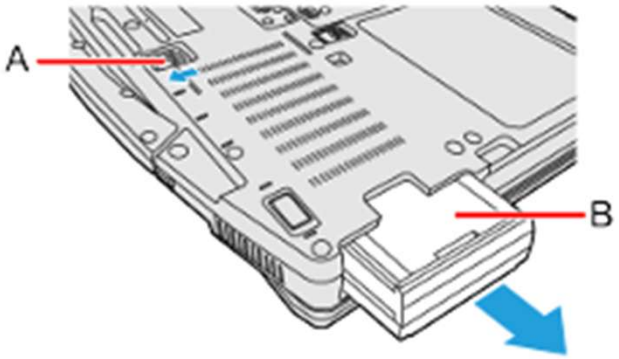

1. **Turn off the computer.**

   Do not use the sleep function.

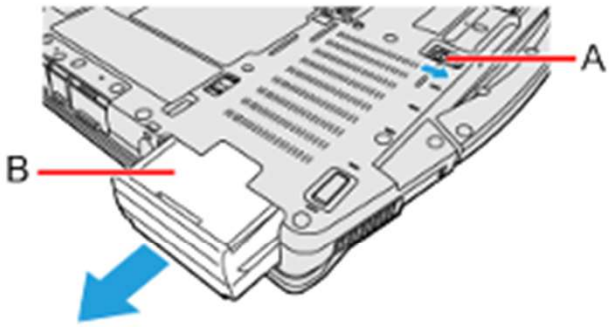

2. **Turn your computer over.**

   Make sure no foreign objects are under the computer.

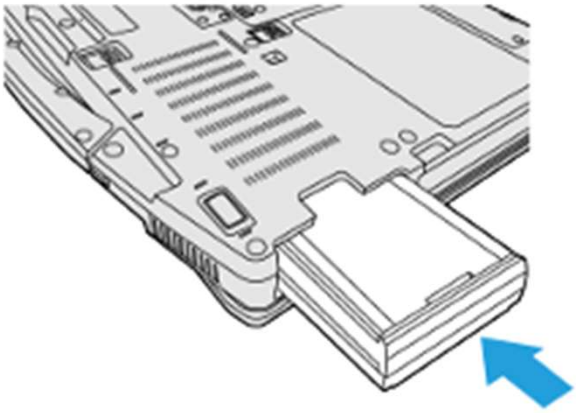

3. **While sliding the latch (A), pull out the battery pack (B).**

<When replacing the second battery pack>

4. **Slide the battery pack in parallel with the arrow direction until it clicks to the secured position.**

<When replacing the second battery pack>
